UPTIME

UPTIME, LAST 30 DAYS

The one thing that went wrong. On 30 October an automatic update stopped checkout from working. We spotted it within 4 minutes, rolled it back, and orders were flowing again by 14:19.

What we did

The key lines from this month's record.

02 Oct	Updated 12 plugins, each one checked against errors and uptime
09 Oct	Installed a WordPress security release
14 Oct	Reviewed and approved a new admin user
21 Oct	Updated the theme and checked /book-a-class and /checkout
30 Oct	Checkout error after WooCommerce 9.4.1, rolled back in 6 minutes
31 Oct	Checked the site and database backup

What it prevented

Problems that never reached your site.

2	updates held by Update Weather before they reached your site, including Elementor 3.25.2
1	known vulnerability patched within a day
212 ms	average load time of /book-a-class

Every line in this report comes from the site's record in WPLogbook. Ask us for the entries behind any of them.
